**Introduction**

India is one of the largest population and 14.8% of the world's population is malnourished. The rural population is 70% of the total population. The rural population is 70% of the total population. The rural population is 70% of the total population.

**Findings with potential and supplementary nutrition**

India is one of the largest population and 14.8% of the world's population is malnourished. The rural population is 70% of the total population. The rural population is 70% of the total population.

**Strategies**

1. Home gardens: Home gardens are the best source of fresh fruits and vegetables. They are easy to maintain and provide a wide variety of nutrients. Home gardens can be established in small plots of land, even in urban areas.

2. Community gardens: Community gardens are a good way to promote healthy eating and physical activity. They provide a place for people to grow their own food and share it with others. Community gardens can be established in public spaces, such as parks and schools.

3. School gardens: School gardens are a great way to teach children about healthy eating and where their food comes from. They can also provide a source of fresh produce for the school cafeteria.

4. Fruit baskets: Fruit baskets are a convenient way to provide fresh fruit to people who do not have access to a home garden. They can be made from a variety of fruits and are easy to transport and store.

5. Nutrition education: Nutrition education is essential for helping people understand the importance of a healthy diet and how to choose nutritious foods. It can be provided through a variety of channels, including community meetings, home visits, and mass media campaigns.
